

FUTURE VISIONS

Treatment planning for today and the future

October 21-23, 2010 Birmingham, AL

Join Dr. David Sarver to expand your vision of esthetics through systematic facial and smile analysis. This intense 3-day course will stress the importance of treating the entire face as a primary goal rather than as an afterthought. Learn how to gather written, photographic and imaging data in all three planes of space to drive treatment planning. Dr. Sarver's course analyzes the long-term changes of facial skeletal and soft tissues to help patients attain and maintain a youthful appearance for as long as possible.

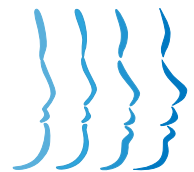

Dr. Sarver with patient Elizabeth

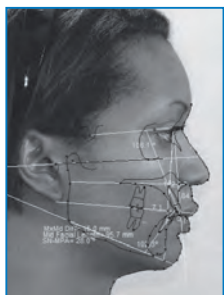

David Sarver, DMD, MS

Dr. Sarver is a diplomate of the American Board of Orthodontics, a member of the Angle Society of Orthodontists and currently serves as an adjunct professor at the University of North Carolina. In addition to his commitment to his private practice and a global lecture schedule, Dr. Sarver actively develops and researches new technologies in the fields of digital imaging, lasers and three-dimensional appliance design. He has published a variety of works with lasting merit such as *Esthetic Orthodontics and Orthognathic Surgery* and coauthored *Contemporary Treatment of Dentofacial Deformity*. Most recently, Dr. Sarver coauthored Dr. Profitt's acclaimed text *Contemporary Orthodontics*. Dr. Sarver's work has been featured nationally on NBC's "Today Show," ABC's "The View" and Fox News.

Today patients expect more from us than at any time before. They want to look great not only immediately posttreatment but also decades after treatment.

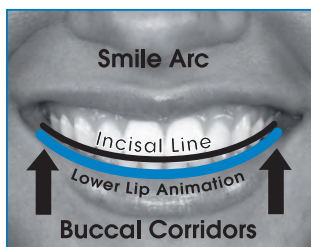

In Dr. Sarver's course, you'll learn the three steps to visual treatment planning.

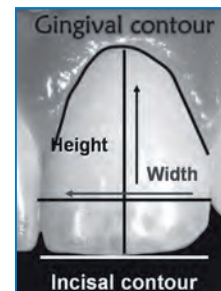

MACROESTHETICS

Analyze the face, including profile, vertical proportions, lip fullness, chin projection, nasal projection and other facial features.

MINIESTHETICS

Maximize incisor display, transverse smile, smile symmetry, crowding and smile arc.

MICROESTHETICS

Evaluate tooth proportions, gingival heights, triangular holes, emergence profiles, tooth shapes, gingival shapes and contours, and incisor angulations.

You'll also gain hands-on experience with digital treatment planning and communication, the use of lasers, and strategic bracket placement.

OPTIONAL ADVANCED LASER TRAINING

Dr. Mark Yanosky will conduct a half-day laser course providing an overview of the clinical use of lasers, laser safety, practical applications, live demonstrations and hands-on practice. Future Vision attendees receive a special discounted rate. See below for details.

REGISTER TODAY!

Mail registration form with payment to Dr. Sarver's office
